

AROUND THE WORLD IN 80 DAYS

This task has been designed to provide you with an opportunity to work with arrays. You will practise sorting arrays and adding values to an existing array.

It is common to have to work with arrays and array values, especially when dealing with database data. Therefore, the more comfortable you are using arrays the better.

TASK

Place the following cities into an array:

London, Paris, Amsterdam, New York, Berlin, Brisbane

Sort the cities alphabetically.

Display the cities as an ordered list. Your output will be like this:

1. Amsterdam
2. Berlin
3. Brisbane
4. London
5. New York
6. Paris

Now add the following cities by using the `array_push` function:

Sydney, Helsinki, Beijing, Dublin, Rome

Sort the cities alphabetically.

Display the cities as an ordered list.

HINTS AND TIPS

`sort()`

`foreach (){}`

`array_push()`

To create an ordered list (i.e. the numbers in front of the cities) for the output you can use the HTML ordered list element.

```
<ol>
    <li>Amsterdam</li>
    <li>Berlin</li>
    <li>Brisbane</li>
</ol>
```
