

## ALL ABOUT ME

This task is all about your ability to process input data and store it in cookies and retrieve the information.

You will create 3 separate files:

- form.php
- process.php
- retrieve.php

### **form.php**

Your task is to create a simple input form for the user to enter the following information:

- Name
- Age
- Favourite colour

### **process.php**

The data entered by the user will be stored in 3 separate cookies.

### **retrieve.php**

This file will retrieve the data from the cookies and display the following:

Your name is (name).

Your age is (age).

Your favourite colour is (colour).

You will replace each of the terms in brackets with the values stored in the cookies.
