

THE GREAT ESCAPE

This challenge looks at how we can escape strings in order to produce validated output.

When you work with other coders' code you will often find complex escaping patterns which can confuse at first sight.

It is therefore a good idea to be fairly comfortable with escaping strings.

TASK

Your task is simply to take each of these sentences and output them in the browser.

`This is Sam's apple!`

`Sam said, "Hello, Colin. How's your new PHP course going?".`

`Sam's mother ordered a new book called "A Day in my Life" from her local bookstore.`

EXTENSION

Replace the name Sam with a variable \$name and produce the required output.
